Aigina

Introduction

The scenery « Greece NEW Vs 1.0 » is a representation of the Aegean Sea and different Greek islands.

Milos

The realization began in September 2017, and a year later, the version 1.0 is available.

To make the scenery, I use objects already existing in other free maps, and I thank all those who put these objects at our disposal.
I use these generic objects, satellite photos and real digital nautical charts to place the objects on the map and try to achieve the most accurate possible port scenes.

The beacons and lighthouses are correctly positioned, their flashing frequency, their sector, and their colors of lights are respected.
When an object is not available, I make it with « Sketchup », it is precisely the case for maritime beacons and some lighthouses.

I hope you will enjoy using my scene "Greece NEW Vs1.0" ... See you soon with the next version.

Scenery map

Surrounded by green, the map of the scenery « Greece NEW Vs 1.0 », and in purple, the overall project.

On this map you will find all the ports, lighthouses, beacons, (with their features) present in the scenery.

The project

To view the map of the scenery, open the Google Earth file "Greece_NEW_Vs01"

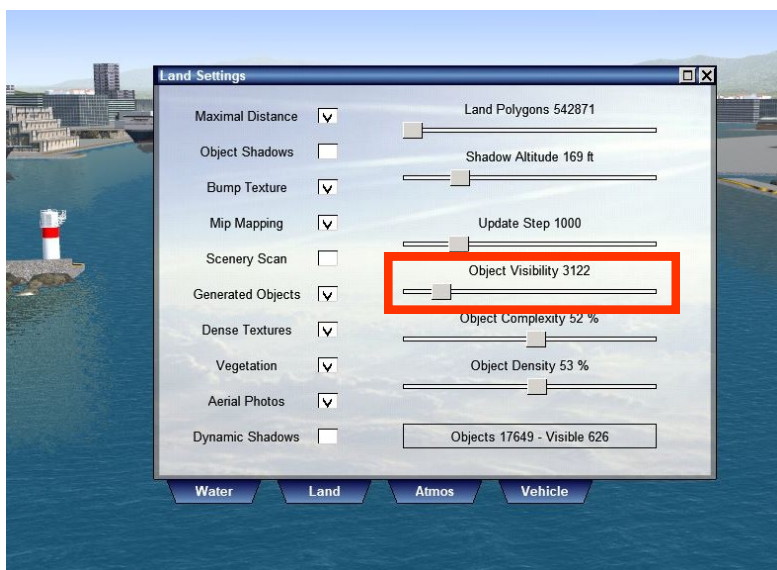

Actual map for the vs 1.0

Installation

It's easy to install ...

1 Extract the files from the compressed folder

2 Copy the file "Greece_NEW_Vs01" into the "scenery" folder of Vehicle Simulator.

3 Copy all the files from the "Common" folder into the "Common" folder of Vehicle Simulator. **(Refuse to copy existing files)**

That's all !

You can start Vehicle Simulator...

... and enjoy the scenery !

In some areas, the density and high number of objects can greatly reduce the fluidity of the screen. (low FPS !)

I advise you to reduce the number of objects visible in the "Graphics / Land" menu of VS.

Destination ideas

SUPER RUNNER in Rafina

MASTER JET in Mykonos

DODEKANISOS EXPRESS in Symi

HIGHSPEED 4 in Naxos

ADAMENTIOS KORAIS In Folegandros

BLUE STAR DELOS in Santorini
